Home Appliances

BEYOND TECHNOLOGY

Main office: Swiss Electronic Enterprises limited (S.E.E)

Home Appliances factory is located in (P.S.E.Z).
The production center focuses on developing Washing Machine and Refrigerator which are more intelligent, efficient, energy-saving, and healthy.

Production Area: 17,350 m2
Administrative Area: 1,529 m2
Industrial Area: 30,704 m2
Total Area: 100,000 m2

Production Capacity (per year)

Washing Machine: 200,000 PCs
Refrigerator: 200,000 PCs
Air Conditioner: 100,000 PCs

FEATURES

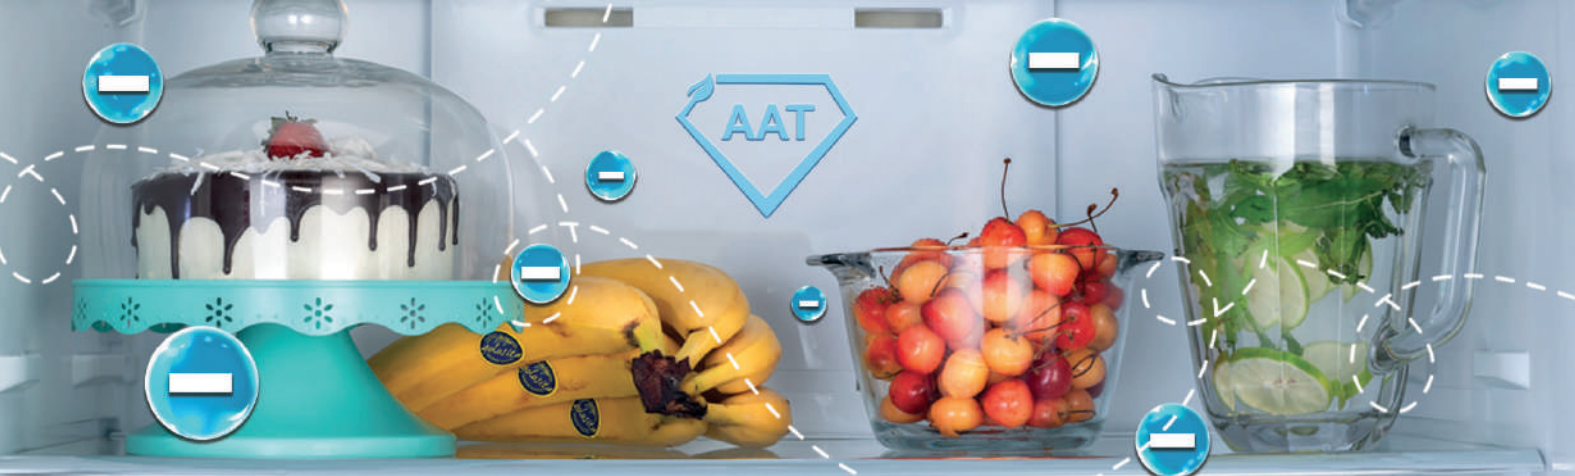

Inverter Compressor

Inverter compressor uses significantly less energy as compared to a regular compressor and also Due to its constant operation has less noise .Inverter compressors startup slowly, resulting in greater durability. In addition, inverter compressor doesn't stop completely, only slows down, thereby the temperature in the refrigerator remains constant, which means better storage conditions for your food.

Swing Airflow Technology

Swing Airflow Technology Dual temperature sensors inside the fridge deliver reliable, consistent readings and temperature control. Cold air flow is more even and stable, ensuring set temperature is maintained and frozen efficiency is improved by up to %20.

AAT Freshness Technology

With natural tourmaline ore as raw material and formed in the cabinet liner, Auto-release anion in the storage space forever, keep vegetables and fruits breathing in the nature, compared with traditional anion fresh technology, zero energy consumption, permanent, and full of all space.

Smarter Food Storage

Multi partitions avoid odors from spreading within the fridge and contaminating other fresh food. 14 individual areas of the inner fridge make storage and cataloguing of food super simple from seafood, to cooked meat. Sort Magic Space according to food type, or remove boxes to free up space for larger items.

Anti-Frost Technology

The latest in anti icing technology combines with multi-air cold flow management. Food spoiling early or becoming too cold is a thing of the past.

Enjoy next generation refrigeration, without extreme, unbalanced areas of the fridge.

FEATURES

CIM INVERTER MOTOR

Flexible care clothing. green and low-carbon

International renowned low noise inverter motor without carbon brush (Max 1400RPM), can save 29% electricity, and stirs a green and low-carbon tendency.

Run stably and mitigate the noise

Universal motor without carbon brush has decentered self correction function, which can ensure the dewatering tub's stable, silent running, and decrease 25% noise.

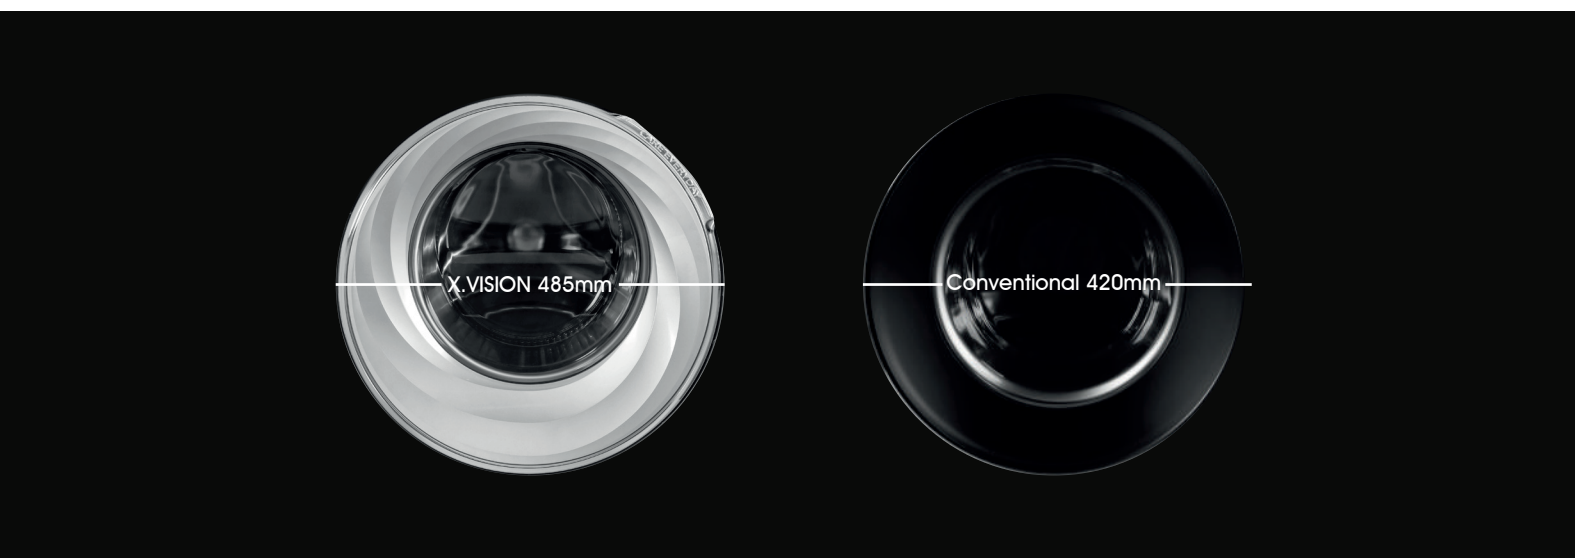

BIG SIZE DOUBLE LAYERS DOOR

Diameter of the front door increase to 485mm. Double Layers Door can insulate heat, and prevent people touch high temperature of the glass bowl during drying process.

SMART VERE WELDING INNER DRUM

Italy imported Smart Vere welding equipment integrates no riveting joints, reaches aviation level welding technology, increases the space for washing, achieves 1400RPM spin speed, improves 40% drum intensity and makes it more safety. Meanwhile, flat drum joints and inner drum with water flow pattern design reduces laundry abrasion rate, clothing can NOT easy to snagging, and care your laundry efficiently.

SPRAY WASH

Wash away foam and prevent chemical residue. Spray up and down from the door seals to reduce chemical residue and protect the laundry.

COBBLESTONE INNER TUB

Unique cobblestone inner tub, simulates hand wash, distributes clothing evenly, buffers water flow, lower wear during wash, provides gentle care, and takes massage to laundry.

FEATURES

Energy Efficient Motor

A BLDC Inverter is more powerful, stronger, and runs at a quieter noise level for optimized performance and lower energy bills.

Add Garment During Wash

The features offers the options to add garments during the washing process. Washer will suspend the wash cycle and unlock automatically after a short seconds.

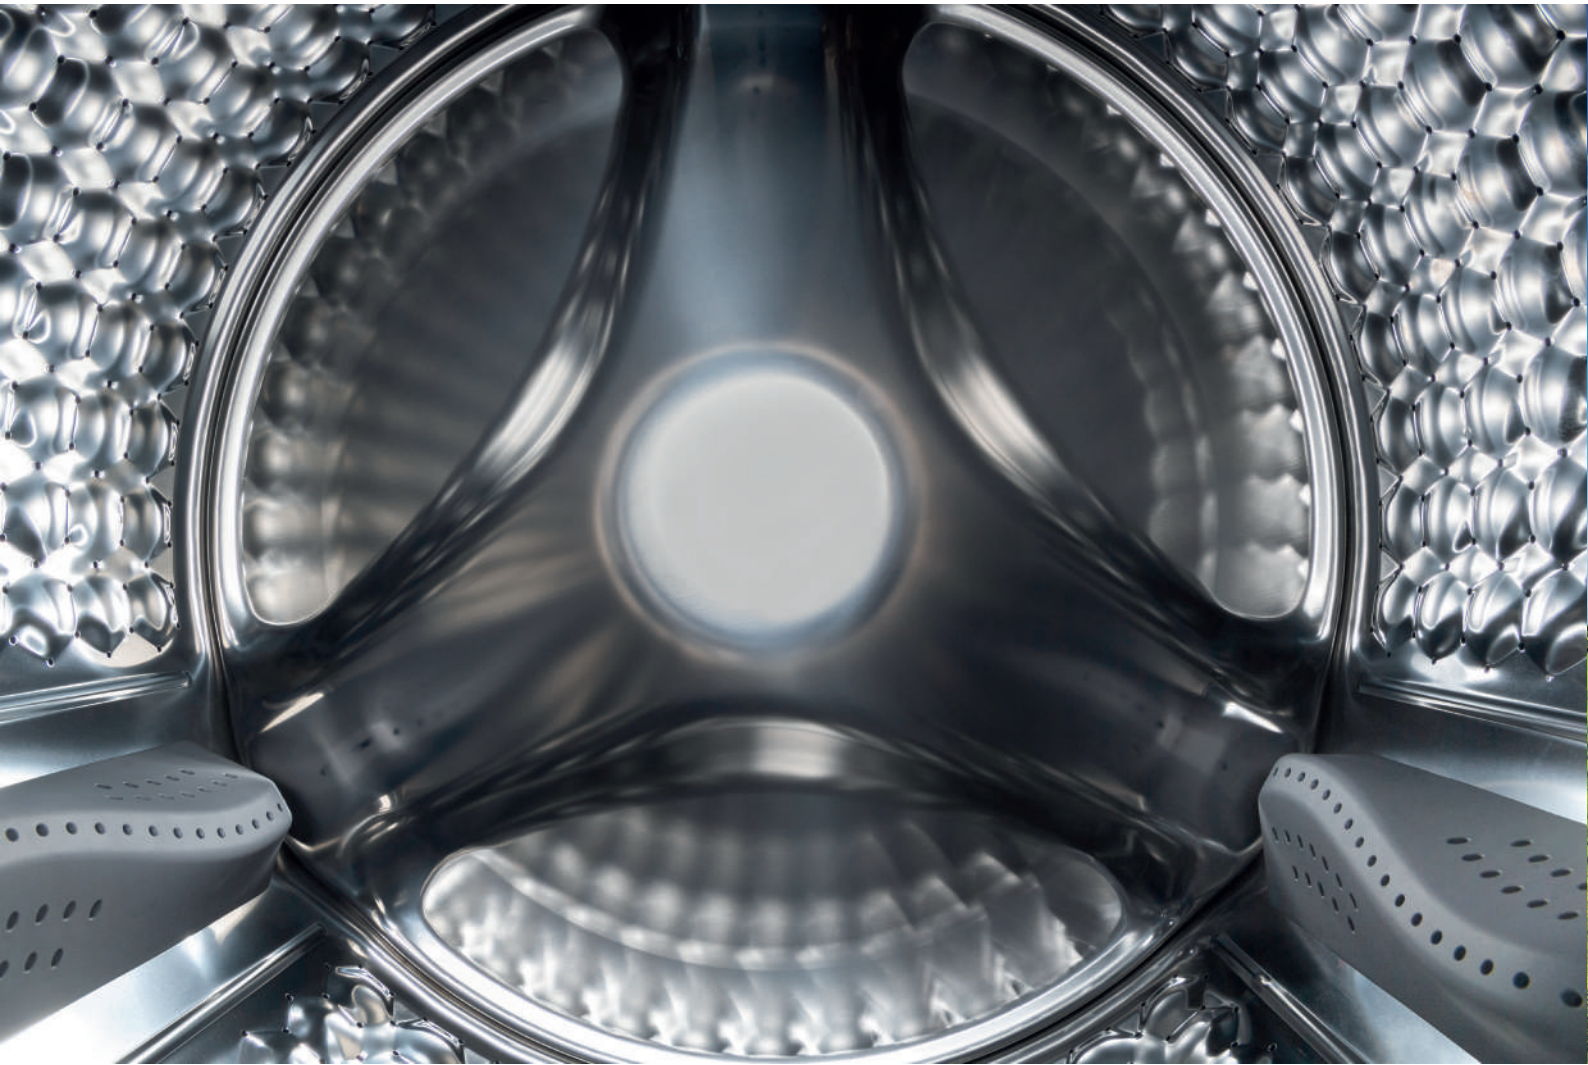

Thin Body Design

A 505mm wider drum allows you to see more of your clothes, lifts items higher for more efficient cleaning, and makes loading and unloading easier.

Honeycomb crystal drum

A honeycomb shaped interior has evolved in order to caress clothes during a cycle, and ensure optimal operation. Larger inner surface plus capillary outlets, allowing for better flow of air, water, and ultimately more efficient cleaning.

Water Saving Washing

An intelligent control module automatically measures the quantity of clothes through a water level sensor. Your wash is then adjusted and optimized for energy efficiency and lower water consumption.
